Fitting Instructions

Tools Required:

- Pencil
- Drill
- Spirit Level
- Screwdriver

Method:

Scan below code to see video instructions:

  https://bit.ly/3gona0X

1) Mark out where you want to position your shelf on the wall

2) Bring the shelf up to the wall with the hangers facing upwards as shown in the picture below.

3) Use a spirit level to ensure the shelf is straight and mark the centres of the hanging brackets on the wall.

4) Drill a hole in each position marked on the wall

5) Push a wall plug in to each hole
6) Fit screw in to each wall plug using the screwdriver until the screw head is sticking out roughly 1cm.
7) Bring the shelf up to the wall and locate the screw heads in to the wall brackets and slide down in to position.
8) If the shelf feels loose, remove it and tighten the screws slightly until it is a snug fit.
